Advancement comes with responsibility.

Incidence of the venous thromboembolism (VTE) in infancy has increased.

It is because of advanced medical technology to detect VTE that was previously undiagnosed.

Advanced medical technology also means more umbilical catheterization,

Umbilical catheterization

Portal vein

which results in VTE of the portal vein.

The advanced medical technology gives rise to need of more careful concern for patients.

Advancement

Responsibility

Advancement must come with responsibility.
